PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS.

- Average margin-to-equity: 15% (range 5% - 25%)
- Correlation: -0.08 to S&P 500; 0.19 to SG CTA Index

Note: Performance shown is for composite of all separate accounts managed. Returns are net of fees and brokerage commissions.

# BENCHMARKING | PERFORMANCE

OCTOBER 2014 – DECEMBER 2022

Since inception, the Discretionary Global Macro Program has added 99 percentage points of alpha relative to the S&P 500 Index and 185 percentage points relative to the SG CTA Index

Note: Returns are net of fees and brokerage commissions and represent the composite performance of individual managed accounts (and not a fund or pool). S&P 500 Total Return Index assumes dividends are reinvested. HFRI data is courtesy of Hedge Fund Research, Inc. The SG CTA Index is an equal-weighted composite of the largest 20 (by AUM) CTA managers open for investment. The Index is not investable and represents the performance of only those large funds that report to the Societe Generale database and not the entire universe of hedge funds.
