AUTUMN GOLD

Buckingham Global Advisors, LLC
WEEKLY E MINI Program (WEP)
Report Period: Mar 2015 – Aug 2026

Current Return: +0.29% **YTD Return:** +5.99% **Annualized Return:** +10.65% **AUM:** $ 39,000,000

Trading Strategy: ST / Systematic / Option Writer / E Mini

Program Description: 1) Buckingham's Weekly E-mini Program (WEP) is a commodity option strategy employing an absolute return investment approach. The Strategy primarily writes (sells) a series of out of money (OTM) call and put option naked or spread combination on S&P 500 E-mini futures, 2) WEP focuses on short duration derivatives - the option expires within 2-8 days, because the time decay is the greatest in those final days. It does this primarily by identifying the option strikes with best risk/reward ratio according to our proprietary Quant model, 3) WEP aims for Sharpe Ratio +2.0 long term (5+ years) considering tail risk due to the economic cycles, 4) Long options or VIX hedge is implemented to reduce drawdown based on daily P/L.

Program Statistics	
Peak-to-Valley Drawdown (2)	-13.77%
From Jan 2020 to Mar 2020	
Worst Month (Feb 2020)	-10.61%

An Important Note on the Start Date and End Date of this Report

If the Start Date of this Report Predates the Inception of the Program, the Maximum Drawdown from Inception may be larger than indicated in this report. Performance Results reported or amended subsequent to Monday September 14, 2026 are not reflected in this Report. Monthly ROR and drawdowns are based on end-of-month values and do not reflect intramonth volatility.

Historical Drawdowns and Recoveries

In the Drawdowns and Recoveries table, Start represents the first losing month after the prior peak. Peak-to-Valley Drawdown dates shown elsewhere in this report begin with the preceding high-water-mark month.

Statistical Footnotes

1. The Annualized Compounded Rate of Return (ACROR) represents the compounded rate of return for each year or portion thereof presented. It is computed by applying successively respective monthly rate of return for each month beginning with the first month of that period. It smooths out the returns by assuming a constant growth.
2. Peak to Valley Drawdown = worst % loss between Mar-2015 and Aug-2026
3. Sharpe Ratio is calculated using a Risk-Free ROR
4. Sortino Ratio is calculated using a Minimum Acceptable ROR
5. Calmar Ratio uses the last 36 months of data
6. Sterling Ratio uses the last 36 months of data
7. VAMI = Hypothetical growth of $1,000
8. Drawdown/recovery: start = first loss, recovery = full return to prior peak

Benchmark Descriptions

AG CTA Index: The Autumn Gold CTA Index is a Non-Investable Index comprised of the client performance of all CTA programs included in the AG database and does not represent the complete universe of CTAs. CTA programs with proprietary performance are not included. Monthly numbers are updated until 45 days after the end of the month. Investors should note that it is not possible to invest in this index.

SP 500 TR: The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US$3.5 billion. The TR Index accounts for the reinvestment of dividends.

This report was prepared from trader-provided information and is believed to be reliable. It should be read alongside each Trader's Disclosure Document or Fund Offering Document.
