Trading Strategy: ST / Systematic / Option Writer / E Mini

Program Description: 1) Buckingham's Strategic E-mini Program (SEP) is a commodity option strategy employing an absolute return investment approach. The Strategy primarily writes (sells) a series of out-of-the-money (OTM) call and put options on S&P 500 E-mini futures, 2) SEP focuses on short-duration derivatives - the option expires within 30 days, because the time decay is the greatest in those final days. It does this primarily by identifying the option strikes with the best risk/reward ratio according to our proprietary Quant model, 3) SEP adopts the risk management mechanism both in position and portfolio level (same as WEP, hedging based on daily P/L), 4) SEP aims for Sharpe Ratio +2.5 long term (5+ years) considering tail risk due to the economic cycles.

An Important Note on the Start Date and End Date of this Report

If the Start Date of this Report Predates the Inception of the Program, the Maximum Drawdown from Inception may be larger than indicated in this report. Performance Results reported or amended subsequent to Tuesday April 14, 2026 are not reflected in this Report. Monthly ROR and drawdowns are based on end-of-month values and do not reflect intramonth volatility.

Historical Drawdowns and Recoveries

The drawdown begins in the month listed as "start." Length is in months. Recovery begins the following month and ends when full recovery is reached.

Statistical Footnotes

1. The Annualized Compounded Rate of Return (ACROR) represents the compounded rate of return for each year or portion thereof presented. It is computed by applying successively respective monthly rate of return for each month beginning with the first month of that period. It smooths out the returns by assuming a constant growth.
2. Peak to Valley Drawdown = worst % loss between Jan-2021 and Mar-2026
3. Sharpe Ratio is calculated using a Risk-Free ROR
4. Sortino Ratio is calculated using a Minimum Acceptable ROR
5. Calmar Ratio uses the last 36 months of data
6. Sterling Ratio uses the last 36 months of data
7. VAMI = Hypothetical growth of \$1,000
8. Drawdown/recovery: start = first loss, recovery = full return to prior peak

Benchmark Descriptions

AG CTA Index: The Autumn Gold CTA Index is a Non-Investable Index comprised of the client performance of all CTA programs included in the AG database and does not represent the complete universe of CTAs. CTA programs with proprietary performance are not included. Monthly numbers are updated until 45 days after the end of the month. Investors should note that it is not possible to invest in this index.

SP 500 TR: The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US\$3.5 billion. The TR Index accounts for the reinvestment of dividends.
